## *Customer Care Excellence in the New Product Development Process*

*Author : Ville Isoherranen and Jukk Majava*

*Journal name : International Journal of Value Chain  
Mangaement*

*Methodology used : The PD process, DfX, and DfC*

**Summary : Excellence in product development**

can be achieved by integrating various stakeholders' requirements into a winning offering. After-market services have become increasingly important for companies, as digitalisation enables new business models and revenue streams. The integration of customer care must be performed in the product development (PD) process in the early conceiving and development phases in order to ensure an excellent customer experience. The traditional elements of care—spare parts, service tools, and support—must be coupled with new services. Future cutting-edge products demand new self-support, repair, and upgrade capabilities that are enabled by the digitalisation of product-service assets and low-cost distribution platforms. This study aims to increase knowledge on how care capabilities can be created in the PD by analysing the critical care inputs and their effects in the product conceiving phase. In addition, the critical care outputs in the case company's product development process in the main phases are presented.

## **Online Complaint Registration System to Municipality**

**Author** : ***A.Prassana, Dr. A.V. Senthil Kumar***  
**Journal name** : ***Online Complaint Registration System to Municipality***

## ***Customer Care in Financial Service***

### ***Organisations***

**Author** : ***Anne M. Smith, Barbara R. Lewis***

**Journal name** : ***International Journal of Bank***

**Marketing Methodology used** : ***Customer care investigations***

**Summary** : *Findings are presented from an investigation of customer care in major UK organisations in the financial services sector, to include banks, building societies and insurance companies. Attention was focused on the need for customer care and service quality, and the development, implementation and*

evaluation of customer care/service programmes , as well as associated staff and management training activities.

## **CUSTOMER SERVICE HELP DESK**

### ***Summary:***

Service Desk can be information Technology Infrastructure Library (ITIL) compliant, which is a set of certified best practices for organizing customer requests. In fact, the term "service desk" originally referred to service desks in IT support , but any company can now benefit from a customer service desk. Your service desk is designed to deal with both incidents – disruptions to service – and service requests , providing a proactive form of customer service.

The alternative to using a service desk is a help desk or call center. You might say that the help desk is tactical, while the service desk is more strategic . A service desk usually incorporates elements of the help desk like the ticketing system – you have the ability to receive incoming tickets and manage them collaboratively . But, with a service desk you also have more oversight of the customer , and service delivery , than you would with a help desk.
